Predictive Services Discussion: An upper low will remain off the Pacific Northwest coast today with southwest flow aloft for the Northwest and northern Great Basin, and portions of the Northern Rockies. Elevated conditions will continue in the afternoon for the interior Northwest, northern Great Basin, and portions of northern California and Northern Rockies. Isolated dry thunderstorms are possible for east central Idaho into Southwest Montana and northern Wyoming during the afternoon. Scattered wet thunderstorms are likely for Utah, Colorado, southern Wyoming, and the Southwest. Localized flash flooding will remain possible over southeast Arizona and southwest New Mexico. A cold front will move through the eastern Great Lakes and Ohio Valley with locally heavy rain and potential flooding. Temperatures are forecast near average for California and the Northwest, but remain above normal for the Great Basin, Northern Rockies, northern Plains and Great Lakes. Southwest flow is forecast for Alaska with above normal temperatures for the southern and central Interior.

Serious Injury Procedures

Firefighter Health & First Aid

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your Crew Boss, Division Supervisor, Incident Commander, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide accurate, concise information on the following:
 - Number of people injured.
 - Type of injuries.
 - Severity of injuries (light, moderate, severe, life threatening).
 - Mechanism of injury.
 - Vital signs (pulse, respiration, level of consciousness, etc.).
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic. Provide updates of the patient's condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, ensure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
